BIOGRAPHY

Gustavo is an Information Systems graduate and a Systems Analyst at Banco Mercantil do Brasil. Gustavo has experience with designing systems and as a undergraduate researcher in the area of complex networks and machine learning. His main interests are Data Science and Machine Learning.

EDUCATION

M.Sc. Computer Science

Universidade Federal de Minas Gerais - UFMG

March 2020 - March 2022

B.Sc. Information Systems

Universidade Federal de Minas Gerais - UFMG

August 2015 - December 2019

EXPERIENCE

Banco Mercantil do Brasil SA

Systems Analyst

February 2019 - Present

- Participated in large scale projects, such as the *Novo Cadastro Positivo*, digital account opening and creation of a variety of new loan products.
- Lead small projects, working with several departments to come up with resolutions to users' requests and also to improve business processes.
- Helped to remodel old systems, improving performance and reliability.

Technology Intern

April 2017 - February 2019

- Helped to design systems, creating solutions to a variety of banking problems, including credit cards, credit analysis and credit rating.
- Maintained legacy systems (COBOL and DB2), fixing problems and adding new functionalities.

Universidade Federal de Minas Gerais - UFMG

Undergraduate Researcher

April 2019 - December 2019

- Worked on a project focused on the problem of predicting a relationship between a user and a microinfluencer on Instagram. The problem was defined as a link prediction task and the user-microinfluencer relationship was modeled as a nearly bipartite graph. Four models to both generate new representations of the nodes and predict a user-microinfluencer relationship were proposed. Three of the proposed models outmarked state-of-the-art on the Instagram dataset and one of the models also outmarked state-of-the-art on other dataset.

PROJECTS

Projects developed include an analysis of bots' network on twitter, mainly using NLP techniques, in the context of the Brazilian presidential elections and a comparison between a variety of Machine Learning models on a quasar detection dataset. All projects are available on my GitHub page.

TECHNICAL SKILLS

Programming Languages: C, COBOL, Python (Proficient); C++, Java (Intermediate); **Database:** SQL (Proficient).

Libraries: Keras, PyTorch, Sklearn, NumPy, Pandas and Plotly.

LANGUAGE PROFICIENCY

Portuguese Native proficiency. **English** Professional working proficiency. **French** Elementary proficiency.

VOLUNTEER EXPERIENCES

Programação 101

March 2019

- Participated as a volunteer instructor in a project that aims to teach basic programming to incoming freshmen.

UFMG Informática Jr.

April 2016 - March 2017

- Worked as a developer and on the financial and administrative sector, helping to coordinate the company's finances and administrative obligations.
